

GIS SOFTWARE for PLANNING & PERMITTING

Informative, Professional GIS Maps Are the Key to a Project's Success

InterAct is well qualified to provide our clients with the visual and informational aid of Geographic Information System (GIS) software to create detailed maps to meet the complexities of oil and gas industry permitting and planning. Organizing your data in a graphic format allows you to share information with multidisciplinary teams and government agencies.

InterAct uses GIS tools for the following:

- Conditional Use Permits, Zoning Clearances
- Asset and well inventories – data organized in tabular and visual formats
- Easement & encroachment permitting
- Storm Water / NPDES Permits
- Maps / figures for permit compliance plans
- Area of Review for injection wells / UIC
- Planning of facility boundary, pipeline routes and well drilling
- Lease purchase due diligence
- Biological and Archeological maps/surveys

InterAct's GIS Services Include:

- Geotagging/GPS Data Collection
- Data / maps analysis & management
- Spatial data processing
- Database development & population
- Conversion of CAD/Excel data to GIS
- Google Earth to GIS database hyperlinking and integration
- Data modelling
- Incorporation of aerial images and topographic information
- Incorporation of GIS data bases from different sources: DOGGR wells and fields, County permit boundaries, water blue lines, Flood Zones, Hydrologic Units, Wetland boundaries
